- **Full-Stack Web Developer** with hands-on experience building responsive, user-focused applications from front end to back end.
- Skilled in developing modern interfaces with React, JavaScript, TypeScript, Tailwind CSS, and PHP.
- Experienced in building backend applications and **RESTful APIs** using Node.js, Express.js, PHP, and Laravel.
- Proficient in working with **MongoDB and PostgreSQL** and integrating applications with external APIs and services.
- Passionate about solving **real-world problems** through clean, scalable, and functional software solutions.

Professional Summary

Motivated and passionate Software Developer with hands-on experience building responsive, user-friendly full-stack web applications. I have developed projects featuring secure authentication, REST API integrations, payment and utility services, role-based dashboards, and business management. Skilled in React, TypeScript, JavaScript, Node.js, Express, MongoDB, Tailwind CSS, and Git, with a strong drive to continuously learn and build impactful digital solutions.

Areas of Expertise

• Front-end development • Back-end development • Database Management • API Integration
• Version Control

Accomplishments (Projects)

InvoiceFlow — Business, Invoice & Financial Management Platform
Built a full-stack platform that enables businesses and organizations to manage invoices, products, inventory, and financial activities from centralized, role-based dashboards. Implemented distinct access levels for Administrators, Inventory Managers, and Accountants, allowing inventory managers to update products while accountants focus on financial records and transactions.

VTUNova — Digital Utility & Payment Platform
Developed a utility services platform that allows users to conveniently purchase airtime and data, pay electricity bills, and subscribe to cable TV services. Implemented additional features including user accounts, transaction management, and a referral program to create a complete and engaging digital services experience.

BulkEmailSender — Bulk Email Automation Platform
Built a PHP/Laravel application that enables businesses to send customized emails to large numbers of recipients efficiently. Implemented Laravel Jobs and queue processing to handle email delivery asynchronously, improving performance and preventing large campaigns from overwhelming the application.

TechCabal Clone — Responsive News & Media Platform
Developed a responsive clone of the TechCabal news platform, recreating its modern layout and user experience while focusing on clean interface design, responsive web development, and effective presentation of news and media content across different screen sizes.

Nextcord — Real-Time Communication Platform
Built a Discord-inspired communication platform designed to replicate the core experience of modern online communities. Developed features and interfaces for organized communication and user interaction, demonstrating skills in building complex, interactive applications with a familiar and intuitive user experience.

Professional Experience

Lagos, Jan 2025 to Aug 2026
Software Developer

- **Built InvoiceFlow**, delivering a centralized business management platform with role-based dashboards for three user roles—Administrators, Inventory Managers, and Accountants—developing invoices, inventory, products, and financial management features.
- **Developed VTUNova**, enabling users to access utility services—airtime, data, electricity, and cable TV—by integrating digital service APIs, transaction workflows, and a referral system.
- **Improved BulkEmailSender's** ability to handle large email campaigns by implementing Laravel Jobs and queue processing, dispatching customized emails asynchronously in manageable batches rather than processing all recipients simultaneously.
- **Recreated the TechCabal user experience** across multiple screen sizes by building a responsive news and media platform with structured content layouts and modern frontend design principles.
- **Built Nextcord**, delivering a Discord-inspired communication platform by developing an interactive, community-focused application with an intuitive interface.
- **Delivered five end-to-end software projects** by applying full-stack technologies including React, JavaScript, TypeScript, Node.js, Express, MongoDB, PHP, Laravel, PostgreSQL, Git, and REST APIs.

Education

Itskillscenter, Lagos, Jan 2026 to Sept 2026
Currently completing an intensive Software Development Bootcamp, gaining hands-on experience in building modern web applications using technologies such as React, TypeScript, Node.js, Express, MongoDB, and RESTful APIs through practical projects and real-world development challenges.

Technical Proficiencies

Front-end: React.js, Tailwind CSS, TypeScript
Back-end: Node.js, Express, PHP, Laravel, TypeScript, JWT Authentication, Databases, MongoDB, MySQL, Postgres, Tools, Git & GitHub, Axios, Postman & Thunder Client, npm, etc.
