PROFESSIONAL SUMMARY

Software engineer building full-stack web applications with React, JavaScript/TypeScript, Node.js/Express, and PHP/Laravel. Project experience includes payment integrations, wallet and transaction workflows, role-based access, and background jobs. Enjoys turning practical requirements into usable interfaces and structured backend services.

TECHNICAL SKILLS

Frontend: React, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, React Router
Backend: Node.js, Express, PHP, Laravel, REST APIs, JWT authentication
Data & background processing: MongoDB, Mongoose, MySQL, Redis, BullMQ, Laravel Jobs
Tools & integrations: Git, GitHub, Vite, Axios, Postman, Thunder Client, Paystack

SELECTED PROJECT EXPERIENCE

VTUNova | Utility Payments & Wallet Platform

- Built a React and Node.js/Express application for airtime, data, electricity, and cable TV services, with user accounts, a wallet, and transaction records stored in MongoDB.
- Integrated Paystack wallet funding and worked on webhook signature verification, provider request IDs, duplicate-processing checks, and pending transaction handling.
- Connected product-specific application events to Redis/BullMQ jobs and notification workers to process notifications outside the purchase request.

InvoiceFlow | Invoicing & Inventory Application

- Built invoice, receipt, product, and inventory workflows with React, Node.js/Express, and MongoDB, including dashboards tailored to business roles.
- Implemented JWT authentication, refresh-token cookies, protected routes, and role-based access for administrative, inventory, accounting, and viewing tasks.
- Integrated Paystack subscription payments and plan-based feature access; worked on background notifications, transaction caching, and stock-movement analytics.

Nexcord | Discord-Inspired React Frontend

- Developed a Discord-inspired frontend with React, focusing on interface composition and user interaction.

Phantom Inbox (BulkEmailSender) | PHP/Laravel Client Project

- Built an unreleased bulk email sender for a client using PHP and Laravel, with customized email delivery to multiple recipients.
- Used Laravel Jobs and queue processing to send emails asynchronously in batches rather than processing every recipient in a single request.

ADDITIONAL WORK

TechCabal Clone: Built a responsive recreation of a news and media interface, focusing on structured content, layout, and presentation across screen sizes.

EDUCATION & TRAINING

Software Development Bootcamp - ItskillsCenter, Lagos | Jan-Sep 2026
Completed the Software Development Bootcamp. Practical project work with React, TypeScript, Node.js, Express, MongoDB, and REST APIs.
